

Deployment report: web

This document was rendered by **tramaj-hpdf** from a template and a JSON context. Inline styles work: *emphasis*, **bold**, code and small text. Long paragraphs wrap at the right margin and break onto new pages when they run out of room.

Services

- **api** — 4 replicas
- **worker** — 2 replicas
- **frontend** — 3 replicas

Rollout steps

1. Drain the old pool
2. Deploy the new version
   - canary first
   - then the rest
3. Verify health checks

Numbers keep their type

integer: 3, float: 3.0

> *A quoted block is indented and set in italics.*

```
$ tramaj-hpdf report.tramaj ctx.json out.pdf
  wrote 1 page
```

A table, laid out as a grid

service	replicas	notes
api	4	Public HTTP API behind the load balancer; scaled on request latency, with a floor of four replicas during business hours.
worker	2	Background jobs.
frontend	3	Static assets and server-side rendering; cached at the edge, so a replica restart is invisible to most visitors.

Unicode outside Latin-1

café, naïve, Ελληνικά and кириллица work; ××× and × are not in Noto Sans and come out as a replacement character.
